

Rx Only

EarlyCDT[®]—Lung

Discussion Guide

+ Let's talk about the nodule on my lung...

- If you have a lung nodule that was detected with a CT scan, **EarlyCDT—Lung** can help your doctor decide if immediate further investigation of your nodules is the best way forward.
- If your nodule is being followed up with more scans, **EarlyCDT—Lung** can detect cancer faster.
- It is a simple blood test. You can even provide the few drops of blood we need yourself, with the fingerstick we provide with our collection kit.

Print this Discussion Guide and take it to your doctor to discuss your lung nodule.

ANSWER THIS:

Do you have a nodule on your lung?
Are you worried about lung cancer?

ASK THIS:

What is the risk of cancer in my nodule?
Is **EarlyCDT—Lung** right for me?
